The Convault ® fuel storage tank was originally designed and patented in 1989. The Convault product line remains the only fuel storage tank system on the market that provides integrated secondary containment with a protective concrete shell. The six inch reinforced concrete shell offers significant protections from tropical and coastal events along with other security benefits.

The Convault product line is now licensed and produced exclusively through Georgia Concrete and Precast (GCP) in a territory that covers the Southeastern United States. Additionally, GCP has partnered with Oxford Tank, LLC to provide exclusive sales and marketing rights within this territory.

GCP holds the UL listed certification for producing, UL2085, UL752 level 8 and the UL 142 tanks.

A handwritten signature in black ink, appearing to read "Bob Palmer", is written over a horizontal line.
