ITB No. 202524

Title: Water Reclamation Facility Class 1 Injection Well System Mechanical Integrity Testing

Bid Opening: October 21, 2025 at 11:00 am. Local Time

Addendum Date: October 2, 2025

ADDENDUM NO. ONE

PURPOSE: The purpose of this Addendum/NOTICE is to make changes, additions, deletions, revisions, and clarifications to the Invitation to bid (ITB) documents for **Water Reclamation Facility Class 1 Injection Well System Mechanical Integrity Testing**. Bidders shall review the Addendum requirements in detail.

CLARIFICATION

1. The deadline for questions is October 11, 2025.

QUESTION

Question 1: On Section 03320 of the bid documents page 155, regarding:

3.03 HYDROSTATIC PRESSURE TESTING WITH PACKER

A. An inflatable packer capable of seating against the casing/tubing shall be set within the bottommost casing section approximately 10 feet above the base of the final casing/tubing. The actual setting depth shall be confirmed based on the results of the video survey.

B. The 16" O.D. injection casing is internally coated with an epoxy-modified phenolic compound (TK-69). This material was applied to the entire internal length of the casing in a uniform thickness of 6.0 to 9.0 mils. For this reason, the Contractor shall submit a plan for Engineer's approval to ensure the coating remains undamaged. The plan may include the use of non-abrasive centralizers (or centralizers equipped with rollers) installed at intervals of 200 feet for the work pipe used to install the inflatable packer device.

Knowing this work has been completed in the past, can we view the previous "approved" plan that was submitted to the Engineer?

Also, with regards to the video of the DZMW-1, what is the ID of the pipe the camera needs to enter?

Response 1: A copy of the previously "approved" plan for non-abrasive centralizers used within the 16-inch O.D. injection casing during the last MIT is attached. The previous plan required the installation of rubber protectors every 200 feet on the work pipe as indicated in the plan drawing. As noted, the protectors were to be sufficiently secured to the work pipe so as not to become dislodged during the installation and removal of the work pipe and during operation of the well when in service. Please see the plan for additional information. Note that the attached plan is provided for reference only. Any submittal from the awarded contractor will be subject to independent review and approval. Prior approval of a similar plan does not obligate acceptance of subsequent submittals.

Regarding the ID of the dual zone monitor well, the tubing in MW-1 is 2 7/8-inches with a thickness of 0.230-inches so the ID is 2.415 inches.

ACKNOWLEDGEMENT: Proposers must acknowledge receipt of any and all Addenda. Failure to do so may result in rejection of the ITB. All requirements of the proposal documents remain unchanged except as cited herein.

Protectors shall be sufficiently secured to work pipe so as not to become dislodged during installation and removal of the work pipe and during operation of the well when in service. The locking mechanism shall not protrude out from the protectors that would cause harm to the casing coating. The protectors shall be counted during installation and removal to confirm that all were retrieved.
