SOUTHERN BOULEVARD ANNEXATIONS

FUTURE LAND USE AMENDMENT

TRANSPORTATION ANALYSIS

INTRODUCTION

It is proposed to annex into the Village of Wellington and change the future land use designation from Palm Beach County Rural Residential (RR-5) and Palm Beach County Commercial to Wellington Residential E and Wellington Commercial on 249.7 acres. The purpose of this analysis is to determine if the proposed future land use designation changes are consistent with the Transportation Element of the Village of Wellington Comprehensive Plan. This study addresses a long-range (Year 2045) traffic analysis and a five-year traffic analysis.

SITE DATA

The site is located on the north side of Southern Boulevard east and west of Seminole Pratt Whitney Road, as shown on **Exhibit 1**. The Comprehensive Plan assigns a maximum intensity to the FLU designations. The maximum intensity scenarios for the existing and proposed FLU for the 249.7 acres are shown below as well as the proposed development plan:

EXISTING LAND USE DESIGNATION	PROPOSED LAND USE DESIGNATION	
RR-5 (1 DU per 5 Acres) for 179.9 Acres Commercial at FAR 0.1 for 69.8 acres Maximum Intensity 36 Single Family DUs 304,048 SF Retail	Residential E (8 DUs per Acre) for 125.8 Acres Commercial at FAR 0.35 for 123.9 acres Maximum Intensity 1006 Multi-Family DUs 1,888,979 SF Retail	Proposed Development Plan 750 Multi-Family DUs 100 Room Hotel 200,000 SF Office 800,000 SF Retail

TRANSPORTATION ELEMENT

Level of Service (LOS) Analysis

In order to assess the transportation impacts of the proposed change in land use designation, the methodology established by the Village of Wellington's Comprehensive Plan was followed.

Trip Generation

Palm Beach County and the Institute of Transportation Engineers (ITE), Trip Generation, 11th Edition, were the sources of trip generation data utilized in this study. Daily and peak hour trips generated by the existing and proposed FLU designations at the maximum intensities are shown on **Exhibits 2A and 2B**. A market study was completed for the development area which established the proposed development plan. This plan was analyzed to determine the long range (Year 2045) 20-year impacts. The daily trip generation for the proposed development plan is provided on **Exhibit 2C**. The comparison of the daily and peak hour trip generation for the maximum intensities of the existing FLU designations with the proposed development plan is provided on **Exhibit 2D**.

The net daily trip generation is used for the Long Range (Year 2045) analysis. Based on the increase of 19,548, the radius of development influence is four (4) miles. For the Five Year Analysis, 25% of the market study intensities were estimated to be in place in five years. The trip generation is shown on **Exhibit 2E**.

Trip Distribution and Assignment

In order to determine the impact of the development's traffic on the surrounding roadway network, a directional distribution of project trips was developed based on the area's land uses and roadway network. Separate traffic distributions were established for the residential and non-residential uses as shown on **Exhibits 3A and 3B** in map and table format, respectively.

Roadway Improvements

A review was undertaken of the FDOT Transportation Improvement Program and the Palm Beach County Five Year Road Program to determine if any roadways within the study area are scheduled to be improved. Southern Boulevard (SR 80) was recently widened to 6 lanes east of Arden Way. There were no other programmed improvements in the area.

Long Range (Year 2045) Analysis

Exhibit 4 provides the net daily trip assignment of the proposed development plan for the surrounding roadway links. It also provides volume to capacity (v/c) ratios and project impact percentages. A roadway is considered significantly impacted for the long-range analysis if project impacts are greater than 5% of LOS service volume for County and State roadways and 1% of the LOS service volumes for Village of Wellington roadways. Year 2045 net project traffic is total external traffic generated by the proposed development plan; less traffic generated by the existing FLU designation at maximum intensity. For the Year 2045 analysis, roadway lanes and traffic volumes were obtained from the Palm Beach Transportation Planning Agency (TPA). This information is provided in **Appendix A**. Traffic from other active amendments in the area has been added to the TPA volumes. Additionally, consistent with the Palm Bech County TPS database procedures, 20% of the net non-residential was shown as intercepted trips that would be captured from the 2045 residential traffic destined east.

Two impacted roadway links are not projected to meet the adopted Level of Service Standards including one link of Okeechobee Boulevard and one link of Southern Boulevard. Both impacted roadway links result in a v/c of less than 1.02. A more detailed evaluation of the corridor's operation which examines signal timing and spacing could show operation at adopted standards with this minimal exceedance of 2% or less projected in 20 years.

Five Year Analysis

This analysis is provided for informational purposes only. A more detailed concurrency analysis is required as part of the land development process prior to any development approvals. **Exhibits 5A through 5D** show the peak hour assignment to the roadways within the four mile radius.

Existing traffic count data for the significantly impacted links is provided in **Appendix B** with the committed development data from the Palm Beach County TPS Database provided in **Appendix C**. The five year roadway link capacity analysis is provided on **Exhibit 6**. The results of this preliminary analysis show that the impacted link of Southern Boulevard is not projected to meet adopted standards with or without this proposed development. According to Florida Statute

163.3180, this link is considered to be a "transportation deficiency". "The improvement necessary to correct the transportation deficiency is the funding responsibility of the entity that has maintenance responsibility for the facility." Furthermore, "the necessary transportation improvements to correct that deficiency shall be considered to be in place". The 8 laning of Southern Boulevard would address this deficiency.

CONCLUSIONS

This analysis shows that the proposed future land use designation changes result in minimal LOS exceedances in the Year 2045 and therefore can be determined to be consistent with the Comprehensive Plan.

(1) Source: Palm Beach TPA, See Appendix.

(2) Source: Wellington Comprehensive Plan based on FDOT 2020 Manual. Adopted LOS is D for County and State roadways and Wellington roadways and Wellington roadways not in the Equestrian Overlay Zoning District (EOZD). The EOZD roadway links have an adjusted LOS E.

(3) Palm Beach TPA shows 4 lanes for these roadway sections; however, they are only 2 lanes and there are no plans to widen.

(4) Palm Beach TPA shows 2 lanes for this roadway; however, it is being constructed as 4 lanes.

(5) Represents 20% of the proposed net non-residential traffic that would capture the 2045 residential traffic destined east.

(6) Significant impact is shown as 1% of LOS source volume for Wellington roadways and 5% for State and County roadways.

APPENDIX A

Palm Beach TPA Adjusted 2045 Two-Way Daily Traffic Volumes Based on Southeast Regional Planning Model (SERPM) version 8.503

The following table provides adjusted 2045 two-way daily traffic volumes derived from the Southeast Florida Regional Planning Model using 2045 demographic growth predictions based on adopted future land use designations in local government comprehensive plans and future transportation facilities and services based on adopted cost feasible project lists in the Long Range Transportation Plans of the Miami-Dade TPO, the Broward MPO and the Palm Beach TPA. SERPM 8, the region's currently supported modeling platform, is an activity-based model approved for use to support Long Range Transportation Plan (LRTP) and Regional Transportation Plan (RTP) development. This table should be used as a supplement to local knowledge of historic, current, and future travel patterns.

The Regional Transportation Technical Advisory Committee - Modeling Subcommittee (RTTAC-MS) reviews and approves requested model updates quarterly to incorporate amendments to LRTP project lists and local government comprehensive plans and to correct significant input errors. SERPM 8 can be downloaded and additional model details can be found at the [SERPM website](#). Network updates are tracked on the SERPM 8 Reference site at <https://sites.google.com/site/serpmp8reference/>. The adjusted volumes table will be updated with subsequent SERPM releases.

The 2045 adjusted traffic volumes were calculated based on the difference between the 2015 base year model outputs and the 2015 observed traffic counts and rounded to the nearest hundred vehicles using one of the following equations:

$$\text{If } \frac{2015 \text{ Observed}}{2015 \text{ Model}} > .8 \text{ and } \frac{2015 \text{ Observed}}{2015 \text{ Model}} < 1.2, \text{ then } 2045 \text{ Adjusted} = \frac{2045 \text{ Model}}{2015 \text{ Model}} \times 2015 \text{ Observed}$$

$$\text{If } \frac{2015 \text{ Observed}}{2015 \text{ Model}} > 1.2 \text{ or } \frac{2015 \text{ Observed}}{2015 \text{ Model}} < .8, \text{ then } 2045 \text{ Adjusted} = 2015 \text{ Observed} + (2045 \text{ Model} - 2015 \text{ Model})$$

For additional assistance or to provide suggestions to improve model outputs in a future model run, please contact Grég Gabriel at ggreggabriel@PalmBeachTPA.org.
